

Frequently Asked Questions

20. In which cases could the modules CA1, CA2 or CH be used for certification of the interoperability constituents wheelsets, wheels, axles, friction elements for wheel tread brakes in accordance to TSI WAG (EU) 321/2013?

The modules CA1, CA2 or CH may be used only in the case of products placed on the market, and therefore developed before the entry into force of the TSI WAG (EU) 321/2013. The assessment of these constituents in accordance with modules CA1, CA2 or CH requires a documented former design review and type examination that meets the requirements of the TSI WAG (EU) 321/2013. The corresponding relevant evidences must be demonstrated by the applicant to the NoBo. This is a general requirement; hence it is not relevant whether the constituent is a mature product widely used.
